The performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please call 1-800-762-7085 or visit [www.cavalhillfunds.com](http://www.cavalhillfunds.com).

Certain fund expenses may have been waived or reimbursed. Had waivers and reimbursements not been in effect, the performance quoted would have been lower. Currently, contractual fee waivers are in effect from December 28, 2025 through December 31, 2026. Class A Shares are subject to a 1.00% Maximum Deferred Sales Charge (Load) on shares purchased without an initial sales charge and redeemed within 12 months of purchase. Performance data does not reflect the Maximum Deferred Sales Charge. If reflected, the load would reduce the performance quoted.

## †Morningstar (as of March 31, 2026)

Morningstar rankings are based on a fund’s average annual total return relative to all funds in the same Morningstar category. Fund performance used within the rankings, reflects certain fee waivers, without which, returns and Morningstar rankings would have been lower. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100.

The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Cavanal Hill Strategic Enhanced Yield Fund was rated against the following numbers of Intermediate Core-Plus Bond funds over the following time periods: rated 4 stars against 496 funds in the last three years, rated 4 stars against 455 funds in the last five years.

## Investment Risks

Fixed income securities are subject to interest rate risks. The principal value of a bond falls when interest rates rise and rise when interest rates fall. During periods of rising interest rates, the value of a bond investment is at greater risk than during periods of stable or falling rates. Short-term investment-grade bonds offer less risk and generally a lower rate of return than longer-term higher yielding bonds. Bond funds will tend to experience smaller fluctuations in value than stock funds. However, investors in any bond fund should anticipate fluctuations in price, especially for longer-term issues and in environments of changing interest rates. High-yield bonds have a higher risk of default or other adverse credit events, but have the potential to pay higher earnings over investment-grade bonds. The higher risk of default, or the inability of the creditor to repay its debt, is the primary reason for the higher interest rates on high-yield bonds.

## Important Disclosures

<sup>1</sup> The 30-day SEC Yield is calculated by dividing the net investment income per share for the 30 days ended on the date of calculation by the offering price per share on that date. The figure is calculated according to a formula set by the SEC which requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period. The standardized computation is designed to facilitate yield comparisons among different funds. Certain fund expenses may have been waived or reimbursed. Had waivers and reimbursements not been in effect, the SEC yields would have been 3.44% for A Shares, 3.45% for Investor Shares and 3.74% for Institutional Shares.

<sup>2</sup> The Bloomberg U.S. Aggregate Bond Index covers the USD-denominated, investment-grade, fixed rate, taxable bond market of SEC-registered securities. The index is unmanaged and does not reflect the deduction of the expenses associated with a mutual fund, such as investment management and fund accounting fees. The Fund's performance reflects the deduction of fees for these services, but does not reflect the deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares. Investors cannot invest directly in an index.

<sup>3</sup> Since December 31, 2017.

<sup>4</sup> **Turnover Ratio** is a measure of trading activity for a rolling 12-month period represented by the percentage of a fund's assets that have changed over the course of the time period. **Duration** measures bond price volatility by measuring the length of a bond.
