

Opportunistic Fund Commentary

significantly increase the Fund's allocation to fixed income.

We remain concerned that consensus outlooks for economic growth and earnings estimates are too high. As such, we continue to position the Fund for the late portion of the economic cycle via lower exposure to cyclical and high-beta (more volatile) stocks and higher exposure to cash and fixed income.

Why should investors consider investing in this Fund?

The Fund has the ability to invest across asset classes and economic sectors as well as be flexible with market exposure. We believe these features are beneficial to clients seeking investment returns regardless of underlying financial, economic, or political environments.

Market Overview

The S&P 500 Index returned 7.5% during the quarter. Ten-year U.S Treasury yields declined more than 40 basis points (0.40%) during the quarter as investors contemplated lower inflation on the horizon counterbalanced by growing fears of a U.S. recession. In anticipation of an end to the Federal Reserve's (the Fed) cycle of monetary tightening, the technology-heavy NASDAQ Composite index rallied 17% during the quarter. This, in turn, was driven by the largest individual stocks in the Index, such as Apple and Microsoft. The Equal-Weighted S&P 500 Index only returned 2.9% during the quarter, highlighting weak breadth as sectors that contain the largest individual stocks (technology, communication services, and consumer discretionary) significantly outperformed the sectors that do not (such as energy and financials).

Positioning the Opportunistic Fund

Portfolio composition is subject to change.

We believe investors' hopes for an economic "soft landing" (as evidenced by the near-term rally in equities) are misplaced. The economy is just now entering a time when the massive monetary tightening enacted by the Fed over the past 12 months should be reflected in poorer economic data. As a result, we took advantage of higher equity prices to reduce exposure. We also took advantage of the February sell-off in bonds to

DISCLOSURES

An investor should consider a fund's investment objectives, risks and charges and expenses carefully before investing or sending money. This and other important information about an investment company can be found in the fund's prospectus. To obtain a Cavanal Hill Funds prospectus or summary prospectus, please call 800-762-7085 or visit us at www.cavanalhillfunds.com. Please read it carefully before investing.

Cavanal Hill Investment Management, Inc. is an SEC registered investment adviser and a wholly-owned subsidiary of BOK Financial Corporation, a financial holding company ("BOKF"). BOKF, NA serves as the custodian for the Cavanal Hill Funds. Cavanal Hill Investment Management, Inc. provides investment advice, administration and other services for the Funds and receives a fee for providing such services as fully described in the prospectus. The Funds are distributed by Cavanal Hill Distributors, Inc. a registered Broker/Dealer, member FINRA and wholly-owned subsidiary of BOKF.

The S&P 500 Index is regarded as a gauge of the U.S. equities market. This index includes 500 leading companies in leading industries of the U.S. economy. Although the S&P 500 focuses on the large-cap segment of the market, with approximately 75% coverage of U.S. equities, it is also an ideal proxy for the total market. This index is unmanaged and does not reflect the deduction of the expenses associated with a mutual fund, such as investment management and fund accounting fees. The Fund's performance reflects the deduction of fees for these services, but does not reflect the deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares. Investors cannot invest directly in an index.

Neither the Funds nor the Funds' investment adviser, Cavanal Hill, undertake any obligation to update, amend, or clarify forward-looking statement, whether as a result of new information, future events or otherwise.

Investment Risks

Equity securities (stocks) are more volatile and carry more risk than other forms of investments, including investments in high-grade fixed income securities. Investments in the Fund are subject to the risks related to direct investment in real estate, such as real estate risk, regulatory risks, concentration risk, and diversification risk. Fixed income securities are subject to interest rate risks. The principal value of a bond falls when interest rates rise and rise when interest rates fall. During periods of rising interest rates, the value of a bond investment is at greater risk than during periods of stable or falling rates. High-yield bonds have a higher risk of default or other adverse credit events, but have the potential to pay higher earnings over investment-grade bonds. The higher risk of default, or the inability of the creditor to repay its debt, is the primary reason for the higher interest rates on high-yield bonds. International investing involves increased risk and volatility. Mid- and small-cap companies may be more vulnerable to adverse business or economic developments. Because an ETF charges its own fees and expenses, Fund shareholders will indirectly bear those costs. The use of leverage in an ETF can magnify any price movements, resulting in high volatility. An inverse ETF seeks to provide returns that are the opposite of the underlying referenced financial asset, index, or commodity's returns. Exposure to commodities may subject the Fund to greater volatility than investment in traditional securities.

Exchange Traded Funds (ETFs) are subject to the risks of the underlying securities (including market risks which could result in the loss of principal) that they are designed to track, although a lack of liquidity in an ETF could result in higher volatility than that of its underlying portfolio of securities. ETFs also have management fees that increase their costs versus owning the underlying securities directly. Derivative instruments like options involve risks different from or possibly greater than the risks associated with investing directly in securities. Investments in the Funds are subject to the risks related to direct investment in Real Estate Investment Trusts, such as real estate risk, regulatory risks, concentration risk, and diversification risk. By itself the Fund does not constitute a complete investment plan and should be considered a long-term investment for investors who can afford to weather changes in the value of their investments.
